

CIS Department Meeting
November 18, 2014

In attendance: Tim Holt, Brian Geans, Fred Colman, Haley Robbins, Tawana Qualls, Jeff James, Teresa Roberson and Stephen Chandler.

Most of the program advisory committee members stated that they utilize free format and RPG IV with SQL embedded. They also use profound logic interface. Power Systems is used with RDI which is the rapid development interface for the I. STRSQL is utilized to start the SQL Editor. They use a browser interface for sealing I programs to apps. CLLE is the updated control language for the I and it allows subroutines.

As for certificates the members fell that certificates are necessary for hardware/software and networking areas. They do not believe that programming certifications are important.

Databases used are Access and MySQL.

The only programming language utilized on the pc is C++. For the web, PHP with SQL calls is sometimes used but the majority use wordpress or some other content management system for their web development.

Watchguard is being used instead of CISCO in many locations and Fred is being used for security. DNS, and Sharepoint are being utilized for virtual machines.

Brian suggested that students be taught how to repair laptops, screens, and tablets.
